SUMMARY

Full Stack Developer with about 4 years of experience in architecting and delivering **large-scale, data-intensive applications** across government and enterprise domains. Specialized in **Laravel and system integration**, with a proven record of building **biometric attendance platforms, HR**, **Leave Management**, **offline-first architectures, and multi-segment synchronization systems** for the **Bombay Municipal Corporation (BMC)**. Adept at **complex backend logic, performance optimization, and secure API design**, I have successfully led and delivered **22+ projects**, including **CRM** and **Ticketing modules**. Passionate about developing **robust, maintainable, and scalable solutions** that enhance operational efficiency and deliver measurable impact.

PROFESSIONAL EXPERIENCE

Currently working as Software Engineer at G-Ordinateur PVT LTD

Mar '25

- Harnessed biometric technology to architect large-scale attendance & management systems for the Bombay Municipal Corporation (BMC), increasing **attendance accuracy by 30%** & reducing data processing time by 40% while managing millions of logs from thousands of field devices daily
- Built a **Laravel-based middleware and sync engine** enabling seamless data flow between offline field systems and the central server using **bulk synchronization, job queues, compression, and retry logic**.
- Spearheaded the integration of a comprehensive ID Card Management System for BMC, digitizing the entire lifecycle from onboarding to secure printing, enhancing accountability & streamlining workflows through **effective vendor coordination & digitization tools**
- Designed and maintained a **multi-segment offline architecture** (Admin, Box Office, Parking, and Kiosk) to ensure continuous operations even in low-connectivity environments.
- Implemented **multi-database synchronization** to maintain consistent primary IDs and resolve data conflicts across distributed databases.
- Enhanced real-time communication by optimizing **WebSocket and API channels**, reducing sync latency and improving device data reliability by **40%**.

Team Lead

Mar '22 - Feb '25

HYPLAP IT SOLUTIONS PVT LTD

Navi Mumbai

- Led full-cycle **Laravel and PHP application development** for diverse clients, improving operational efficiency by up to **40%** across real estate, healthcare, and e-commerce sectors.
- Developed **RESTful APIs** and integrated **third-party services** like Razorpay, Paytm, and Google Maps to enhance functionality and user experience.
- Optimized **MySQL performance** and improved system response times for applications handling large datasets.
- Facilitated Git version control & code reviews using GitHub & GitLab, **enhancing team collaboration & accelerating release cycles**

EDUCATION

Bachelors of Science in Information Technology (IT)

Jul '18 - Jul '21

Mumbai University

Executive PG Programme in Software Development

Mar '24 - Apr '25

IIIT Bangalore

Completed an advanced, project-driven postgraduate program to deepen full-stack development expertise alongside professional experience. Focused on scalable web architecture, modern front-end frameworks, robust backend development, and deployment strategies using CI/CD and cloud platforms. Delivered industry-aligned capstone and multiple hands-on projects, further strengthening production-grade coding, API design, and agile collaboration.
